

Installation Manual

Dilution trap 50-402

Materials

Upper part: Acid resistant Polyethylene

Catchpot: Heat-resistant borosilicate glass

Capacity: approx. 2,3 litre

Connections: 1 1/2" BSP x 50mm (quick connection)

Installation

The dilution trap is supplied ready for use. Installation should be directly near or under the sink. Please check if the upper part and the catchpot are tightened well to each other, to avoid any leakage. To tighten, use only the large nut, do not turn the upper part to tighten. Connect the trap to the sink outlet and the waste pipe.

Cleaning and Maintenance

The catchpot needs to be emptied and cleaned regularly. When re-mounting the catchpot to the upper part, make sure that the silicone ring is fitted in the correct position in the upper part (position the small holes in the silicone ring on the pins in the upper part).

Make sure that the couplings are tightened well before use, to avoid leakage.

Available replacement parts

Upper part (50-403), Catchpot (50-404), Silicone ring (50-405)
